
ASO HubSpot Ingress-Last Standard

HubSpot ingress-only boundary, field mappings, prerequisites, restrictions, and acceptance criteria.

GitHub path: `hubspot/ASO_HubSpot_Ingress_Last_Standard.md`

Version 1.1 - public customer-ready split package - refined for readability and GitHub publishing

Safety note: this public reference pack must not contain tenant IDs, credentials, secrets, real customer data, private endpoints, or connection strings.

HubSpot ingress-last standard

HubSpot is upstream source-only for lead/contact ingress. It must not own opportunity progression, lifecycle communications, SAP actions, AI orchestration, or seller truth after ingestion.

HubSpot is implemented last. The controlled Dynamics/Dataverse, Customer Insights, SAP/APIM, Sales AI, Foundry, and Power Automate path must be proven before upstream ingress is enabled.

HubSpot rules

Rule	Standard
Sync direction	HubSpot -> Dynamics Lead for first release.
Required mappings	HubSpot contact ID -> aso_hubspotcontactid; source -> aso_hubspotsource; email -> emailaddress1; phone -> telephone1; company -> companyname; title -> jobtitle.
Restrictions	No opportunity writeback unless explicitly approved; no lifecycle customer communications after Dynamics ingress; no overwrite of seller-owned fields; no duplicate creation on retry.
Validation	Test one lead, confirm duplicate detection, confirm Power Automate lead flow runs, confirm HubSpot does not own opportunity progression.

HubSpot delivery prerequisites

- Dataverse schema and duplicate detection are complete.
- Customer Insights communication plane is configured and consent-aware.
- SAP/APIM read and write boundaries are tested.
- Sales AI and Foundry orchestration are governed and validated.
- Power Automate Lead flow is stable.
- E2E tests pass without HubSpot.

Ingress acceptance criteria

Acceptance point	Required evidence
No duplicate lead	HubSpot contact ID alternate key or governed duplicate detection works.
Dataverse ownership	Lead owner, status, source, and ASO fields are correctly populated after ingress.
No downstream ownership	HubSpot does not write opportunity progression or journey ownership.
No lifecycle sends	HubSpot is not used for lifecycle customer communication after Dynamics ingress.
Operational trace	Lead flow records message_id/correlation_id and Agent Run Log where applicable.
